Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

10/501,366

Applicant(s)

WOJCIECHOWSKI ET AL.

Examiner

Christopher M. Koehler

Art Unit

3726

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 15 May 2007.
- 2a) ☒ This action is FINAL. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-3, 5-7 and 9-12 is/are pending in the application.
- 4a) Of the above claim(s) 9-12 is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-3 and 5-7 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 5/15/2007 has been entered.

Claim Rejections - 35 USC § 102

2. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
3. Claims 1-3, and 5-7 are rejected under 35 U.S.C. 102(b) as being anticipated by Muller (US Patent No. 5,882,159).

Claim 1:

Muller teaches a method of forming a sealed female fastener and panel assembly, wherein the female fastener includes an annular pilot portion (32) having an annular end face (132, figure 2), a bore extending through said pilot portion through said end face, an annular flange portion (42) having an annular end face (142) parallel to said end face of said pilot portion, and an annular groove (118) in said flange portion having a bottom wall and relatively inclined side walls including an outer side wall and an inner side wall inclined radially outwardly from adjacent said bottom wall wherein the method comprises, driving an annular lip (56, 256) of a die member (12) against a panel

Art Unit: 3726

(16) engaging said annular end face of the pilot portion, said annular lip having an inner diameter less than an outer diameter of said of said annular end face of said pilot portion and an outer diameter less than an inner diameter of said outer side wall of said annular groove, thereby piercing a slug from said panel having a diameter less than the outer diameter of the annular end face of the pilot portion and forming an opening through said panel (figure 1; col. 6, line 66-col.7, line 28), continuing to drive the annular lip of the die member against a panel portion surrounding the opening in the panel and against an outer periphery of the annular end face of the pilot portion thereby shaving an annular outer portion (58) of the pilot portion generating an annular radial protrusion continuously against an inner portion (60) of the panel portion (see left side of figure 1 and col. 10, lines 43-49), continuing to drive the annular lip of the die member against the panel portion and the annular outer portion of the pilot portion and deforming the pilot portion against the bottom wall of the annular groove thereby deforming the panel portion radially inwardly and outwardly entrapping the panel portion in the annular groove and sealing the female fastener on the panel (figure 1).

Claim 2:

Muller teaches that the outer side wall of the annular groove is inclined radially inwardly and the panel portion is integral with a remainder of the panel, the method further including deforming the panel portion radially outwardly beneath the inclined outer side wall of the annular groove (figure 1).

Claim 3:

Muller teaches that the outer side wall of the annular groove is arcuately inclined radially outwardly and the panel is deformed around the arcuately inclined surface of the outer side wall of the annular groove (see figure 3, proximate line 224).

Claim 5:

Muller teaches a method of forming a sealed female fastener and panel assembly, wherein the female fastener includes a generally cylindrical pilot portion (32) having an annular planar end face (132, figure 2), a bore extending through said pilot portion through said annular planar end face, an annular flange portion (42) surrounding said pilot portion having an annular end face (142) parallel to said end face of said pilot portion, and an annular groove (118) in said flange portion having a bottom wall and relatively inclined side walls including an outer side wall inclined inwardly from said bottom wall toward said pilot portion and an inner side wall inclined radially outwardly from adjacent said bottom wall toward said flange portion, wherein the method comprises, driving an annular lip (56, 256) of a die member (12) through an opening in a panel (16) supported on the annular end face of the flange portion, said annular lip having a generally planar annular end face, a generally cylindrical inner surface having an inner diameter less than an outer diameter of said of said annular end face of said pilot portion and an outer diameter less than an inner diameter of said outer side wall of said annular groove (figure 1; col. 6, line 66-col.7, line 28), continuing to drive the annular lip of the die member against the annular end face of the pilot portion and an annular panel portion surrounding the opening in the panel thereby shaving an annular outer portion (58) of the pilot portion generating an annular radial protrusion

Art Unit: 3726

continuously against an inner portion (60) of the panel portion (see left side of figure 1 and col. 10, lines 43-49), continuing to drive the annular lip of the die member against the annular outer portion of the pilot portion and the panel portion against the bottom wall of the annular groove thereby deforming the panel portion radially inwardly and outwardly so as to form a portion on the pilot portion extending into the panel portion thereby entrapping the panel portion in the annular groove and sealing the female fastener on the panel (figure 1).

Claim 6:

Muller teaches that the outer side wall of the annular groove is arcuately inclined toward the pilot portion and the panel is deformed around the arcuately inclined surface of the outer side wall of the annular groove (see figure 3, proximate line 224).

Claim 7:

Muller teaches that the method includes deforming the panel portion radially outwardly beneath the inclined outer side wall of the annular groove (figure 1).

Response to Arguments

4. Applicant's arguments filed 5/15/2007 have been fully considered but they are not persuasive.

Applicant argues that Muller only displaces noses (58, 258) by the teeth (56, 256) causing an inconsistent deformation of panel material not intended to provide a seal. Muller teaches in column 10, lines 43-49 that the teeth (56, 256) may be replaced by a peripherally extending ring shoulder, or step, which would cause consistent deformation and provide a seal.

Conclusion

5. This is a Request for Continued Examination of applicant's earlier Application No. 10/501,366. All claims are drawn to the same invention claimed in the earlier application and could have been finally rejected on the grounds and art of record in the next Office action if they had been entered in the earlier application. Accordingly, **THIS ACTION IS MADE FINAL** even though it is a first action in this case. See MPEP § 706.07(b). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no, however, event will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Christopher M. Koehler whose telephone number is (571) 272-3560. The examiner can normally be reached on Mon.-Fri. 7:30A-4:00P.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Bryant can be reached on (571) 272-4526. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
